

System requirements

LINUX Ubuntu or Debian-based	ARCHITECTURE 64-bit Intel/AMD amd64 / x86_64	INSTALLER Debian package .deb	INTERNET Required during installation if dependencies are needed
---------------------------------	--	-------------------------------------	--

Before installing Thambaa, make sure you have a Linux computer with a 64-bit Intel/AMD processor (amd64 / x86_64), running Ubuntu or another Debian-based distribution. An internet connection may be required during installation if additional system dependencies need to be installed.

A Install it

1 Download the installation file

- Download the Thambaa Debian installation package provided by your administrator or Thambaa support team.
- The file will have a name similar to thambaa_2.0.0_amd64.deb.
- Save it somewhere easy to find, such as your Downloads folder.

2 Open the Terminal

- Open the Terminal application.
- Usually press Ctrl + Alt + T, or open Applications and search for Terminal.

3 Go to the Downloads folder

- If the installation file is in Downloads, run:
`cd ~/Downloads`

4 Install Thambaa

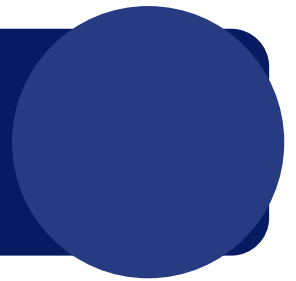

- Run the command below. Replace the filename if your downloaded package has a different version number.
`sudo apt install ./thambaa_2.0.0_amd64.deb`

5 Enter your password and finish

- The system may ask for your Linux account password. Enter it and press Enter.
- When entering a password in Terminal, the characters are not displayed. This is normal.
- Ubuntu will display the installation progress. A successful installation will finish with a message similar to Setting up thambaa (2.0.0)

Important

Do not repeatedly reinstall if an error appears. Take a screenshot of the Terminal showing the error and keep the complete error message for support.

B Open Thambaa for the first time

- 1 Open the application**
 - Open the Applications menu and search for Thambaa.
 - Click the Thambaa application icon.
 - Thambaa can also be started from Terminal by running `thambaa`.

- 2 If Thambaa does not appear**
 - Restart the computer and search for Thambaa again.
 - You can also try launching it from Terminal with `thambaa`.

If something goes wrong

WHAT YOU SEE	WHAT TO DO
Thambaa does not appear in the Applications menu	Restart the computer and search for Thambaa again. You can also try launching it from Terminal with <code>thambaa</code> .
The installation shows an error	Do not repeatedly reinstall. Take a screenshot of the Terminal showing the error and send it to your Thambaa administrator or support team.
You need to report an installation problem	Include your Linux distribution and version, confirm that the computer is 64-bit, provide the complete error message, and attach a screenshot of the installation error.
